

Open Position:

User Interface Engineers

Position Overview

Baldwin Hackett & Meeks, Inc. (BHMI) is looking for experienced **User Interface (UI) Engineers** to work primarily in the Concourse Financial Software Suite product group. This position is responsible for designing and developing intuitive, browser-based user interfaces and services for BHMI's range of back office financial products as well as custom solutions across a variety of industries.

The Concourse Financial Software Suite™ consists of a family of highly configurable, robust, rules-based applications that manage the back office operations of electronic payment processors, including banks, merchants, financial networks, and other processors of financial transactions. Concourse delivers mission critical solutions for the electronic payments industry in the areas of settlement, clearing, disputes, reconciliation, and fees assessment.

Professional Skills

BHMI currently has openings for User Interface Engineers who have three or more years of experience. These positions need self-directed team players who can work effectively in dynamic situations and who have the following skills:

- Browser development using Java, HTML/XHTML, CSS, and JavaScript
- User interface design for browser-based applications with emphasis on human factors and workflows
- Experience in developing quality software from design through delivery
- Strong problem solving and analytical skills
- Good communication (written and oral) and interpersonal skills
- Ability and interest in learning new skills and technologies
- Ability to derive creative and efficient solutions

Desired qualities of candidates include

- Frameworks experience with CDI, Facelets, Hibernate, JSF, Primefaces, and Seam
- Application knowledge of Eclipse and Photoshop
- Utilization of Apache, JBoss, Tomcat, and Weblogic
- Mobile application design and development experience
- Experience using C# and C++
- Experience with SQL databases such as Oracle, DB2, MS SQL Server, or NonStop SQL
- Ability to function effectively within project teams using UML and to utilize the latest emerging technologies and development toolsets

Candidates will need a BS or BA in Computer Science, Information Technology, or equivalent experience.

If You . . .

- Are looking for a chance to work in an agile OOA/OOD environment
- Want to work with the latest development toolsets
- Want to work with contemporary hardware and operating systems
- Want to work in a team environment
- Want to be the first to learn new technology within an organization
- Want to learn from others with years of successful design, engineering, and implementation experience
- Want to create sophisticated browser-based applications that are easy to use and pleasing to view
- Want your own office (not a cube)
